ABSTRACT:

PROBLEM TO BE SOLVED: To provide an information
processor capable of easily
setting a desired network parameter.

SOLUTION: This information processor 10 is provided with
a packet capture
part 12 acquiring a packet from a network 200, a packet
analyzing part 14
extracting a network parameter from the acquired packet, a
storing part 16
constructing an input support database 16a including use
quantity information
about use quantity in the network 200 of the extracted

network parameter and
stores the use quantity, a control panel 18 forming a user
interface picture
-----for performing network parameter setting in the information-----
processor 10 on the
basis of the use quantity information included in the
database 16a and
displaying the user interface picture, and a failure
detecting part 20
detecting a failure of the network 200 on the basis of the
use quantity
information included in the database 16a.
